

1 ABSTRACT OF THE DISCLOSURE

2 A connector apparatus of a hard disk drive allows a connector automatically contact a flexible
3 printed circuit board upon combining a printed circuit board with a the head/disk assembly. The
4 connector apparatus includes a printed circuit board with the connector mounted thereon, and a
5 head/disk assembly with the flexible printed circuit board mounted thereon. The connector includes
6 a plurality of hooklike terminals for automatically connecting with the flexible printed circuit board
7 when combining the printed circuit board with the head/disk assembly.
